AgriMind-Ethiopia

From Disease Diagnosis to African Agricultural Intelligence

Founder & Technical Lead: Fethu Mohammed

EAII AI Startup Support Program — 2026 Cohort II

Idea Stage Working Document

Current Stage: Working MVP • Early Ethiopian Dataset • Validation Phase

OUR VISION

What We Are Building

"AgriMind-Ethiopia is building the AI-powered agricultural intelligence infrastructure that helps every Ethiopian farmer make better decisions — from disease diagnosis to market access — using localized data, expert knowledge, and accessible technology."

OUR EVOLUTION PATH

From MVP to Continental Infrastructure

Stage	Timeline	What We Become	Key Output
Stage 1	Now	AI Crop Diagnosis App	Disease detection
Stage 2	Year 1-2	Agricultural Intelligence Platform	Decision support
Stage 3	Year 3-5	Full Ecosystem Platform	Farm operating system
Stage 4	Year 5-10	African Agricultural Infrastructure	Continental intelligence

"We don't build everything at once. We build one layer, validate it, then expand."

STAGE 1

AI Crop Diagnosis — Where We Are Today

Month 0-6 • 3-person team • Working MVP

What We Are

A focused AI software company building one thing extremely well — image-based crop disease diagnosis for Ethiopian farmers.

What We Provide

- AI Disease Diagnosis (farmers, free)
- Treatment Recommendations
- Prediction History
- 3 Languages (EN/AM/OM)
- Mobile + Web App
- Cooperative Dashboard (Month 3)
- API Access (Month 4)

Success Metric: "A farmer photographs a diseased crop and gets an accurate diagnosis in their own language within 3 seconds."

STAGE 2

Agricultural Intelligence Platform

Year 1-2 • 15-person team • $100K revenue

Category	New Services We Add
Crop Health	Pest ID, Nutrient Deficiency, Severity Assessment
Weather	Local Forecast, Disease Risk Alerts, Irrigation Guidance
Advisory	Planting Calendar, Fertilizer Advice, Crop Rotation
Institutional	Dashboard, Heatmaps, Early Warning, Analytics, API
Communication	SMS Diagnosis, Voice Assistant, Offline Mode, Expert Chat

Success Metric: "AgriMind is the go-to agricultural intelligence platform for Ethiopian cooperatives, NGOs, and agribusinesses."

STAGE 3

Full Ecosystem Platform

Year 3-5 • 50-person team • $1.2M revenue • 3 countries

Category	New Services We Add
Farm Management	Farm Profile, Crop Tracking, Yield Prediction, Carbon Tracking
Market Access	Market Prices, Price Trends, Buyer Connections, Export
Financial	Loan Eligibility, Insurance, Savings, Payments
Supply Chain	Input Ordering, Mechanization, Logistics, Storage
Advanced Tech	Satellite, Drones, IoT Sensors, AI Automation
Knowledge	Training Platform, Community, Expert Network, Certification

Success Metric: "AgriMind is the operating system for Ethiopian agriculture — connecting 1 million farmers to knowledge, inputs, markets, and finance."

STAGE 4

African Agricultural Intelligence Infrastructure

Year 5-10 • 200+ team • $18.5M revenue • 10+ countries

Category	New Services We Add
Multi-Country	Country AI, Regional Analytics, Policy Intelligence
Continental Data	African Crop Dataset, Disease Surveillance, Climate Data
Government	National Dashboards, Food Security Alerts, Policy Recommendations
Enterprise	White-Label, Research API, Insurance Integration
Technology	Open Source Models, African Language AI, Edge AI

Success Metric: "AgriMind is the agricultural intelligence infrastructure for Africa — powering food security for 100 million farmers."

OUR GROWTH AT A GLANCE

Every Metric, Every Stage

Dimension	Stage 1 (Now)	Stage 2 (Y1-2)	Stage 3 (Y3-5)	Stage 4 (Y5-10)
Organization	AI software	Ag intelligence	Full-stack agtech	Continental infra
Core Product	Diagnosis	Decision support	Farm OS	Ag intelligence
Services	1	15+	50+	100+
Disease Classes	19	50+	100+	200+
Crops	6	15	30	50+
Languages	3	6	12	30+
Countries	1	1	3	10+
Farmers	100	50K	1M	10M+
Team	3	15	50	200+
Revenue	$0	$100K	$1.2M	$18M+

WHAT WE ARE REALLY BUILDING

Not What You Think

We are NOT building:

- Another agricultural app
- A marketplace
- A chatbot
- A weather app
- A farm management tool

We ARE building:

- An agricultural intelligence layer that powers everything else
- A data flywheel — more farmers → more data → better AI
- A platform that other platforms plug into
- An infrastructure for Ethiopian and African agriculture

"We don't compete with Lersha, FarmerChat, or ATI. We power them."

OUR COMPETITIVE MOAT

Why We Win

"Global platforms have scale. We have Ethiopian field data. That's a moat they cannot easily copy."

HOW WE MAKE MONEY

B2B + B2B2C Business Model

For Farmers: Free forever. Disease diagnosis, recommendations, history, 3 languages.

Service	Price Range	Target Customer
Cooperative Dashboard	$500-5,000/year	Cooperatives
Analytics Reports	$1,000-5,000/year	NGOs, Research
API Access	$5,000-20,000/year	Agribusinesses
Custom Deployment	$20,000-100,000	Government
Technical Support	$500-2,000/year	All institutions

"Farmers create impact. Institutions create revenue. Everyone wins."

WHY WE WIN

Our Unfair Advantages

Advantage	Why It Matters
Ethiopian field data	Global platforms don't have it
Expert validation	Our labels are scientifically credible
Local languages	EN/AM/OM — farmers understand
Cooperative distribution	Trusted channels already exist
B2B + B2B2C model	Sustainable revenue from institutions
Government alignment	DAR flags Agricultural Intelligence as gap
Team commitment	3 people, full-time, EAII office
Clear roadmap	Month-by-month execution plan

"We are not competing with the ecosystem. We are filling the gap the ecosystem identified."

THE ASK

What We Need from EAII

Closing the gaps on our 6-month journey to launch

#	What	Why
1	AI/ML Mentorship + HPC Resources	Model development, dataset training
2	Agronomy Expertise	Expert validation, local crop knowledge
3	Field Partnerships	Cooperatives, extension networks
4	Business Mentorship	Pricing validation, pilot design
5	Funding & Connections	Dataset collection, pilot deployment

Our Next Milestones:

Expand Ethiopian Data → Validate with Experts → Run Field Pilots → Build Decision Support → LAUNCH

"We start with disease diagnosis.

We become Ethiopia's agricultural intelligence infrastructure.

We scale to power African agriculture."

AgriMind-Ethiopia

From field images to localized agricultural decisions.
